Liquidambur styraciflua ‘Worplesdon’ (‘Worplesdon’ sweetgum) was selected from seeds from the United States, by
the Merrist Wood Agricultural College in Worplesdon, England. The tree is stronger and better withstands the wet,
windy climates in north-western Europe than the main species. ‘Worplesdon’ grows up to 15 metres high and has a
semi-open, pyramidal crown.

In May, the cultivar blossoms with discrete, single yellow-green spikes. The palmate, beautifully cut leaves bud green
and turn a gorgeous shade of orange, orange-red and red-violet hues in the autumn. Its autumn colour is consistent -
one of the reasons for the tree’s popularity. In the autumn, Liquidambur styraciflua ‘Worplesdon’ bears small, brown-
green capsules that stay on the tree for a long time. In its youth, the trunk is smooth, and furrows appear later on.

The ‘Worplesdon’ sweetgum can better withstand salty winds than the main species, but does then develop a
compact crown with so-called short shoot. The tree prefers loamy, nutrient-rich soil, in a sunny environment for the
best autumn colours. The tree can tolerate pavement, as well as wind, drought, heat, air pollution and brief floods.
Thinning the tree once every 5 to 7 years is recommended; a crown that is too dense will lead to dead wood. Grafting
the ‘Worplesdon’ can lead to delayed incompatibility; the species should always stand on its own roots.

TYPES OF PLANTING

Trees: standard trees, feathered trees, multi-stemmed trees, climate trees, trees for climbing, shade trees | Topiary on stem: block, roof-trained, espalier, pleached | Topiary: espalier, pleached

USE

Location: street, avenue, square, car park / parking lot, park, central reservation, large garden, cemetery, traffic areas, industrial zones, bioswale | Pavement: none, open, sealed | Planting concepts: Climate planting, Prairie planting

CHARACTERISTICS

Crown shape: pyramidal | Crown structure: semi-open | Height: 12 - 15 m | Width: 8 - 12 m | Winter hardiness zone: 5B - 10B

ASPECTS

Wind: slightly tolerant to wind, slightly tolerant to coastal wind | Soil: loess, sabulous clay, peaty, light clay, sand, loamy soil | Nutrient level: moderately rich in nutrients, rich in nutrients | Soil moisture level: dry, moist, wet | Light requirements: sun, partial shade | pH range: acidic, neutral (4.5 - 7.5) | Miscellaneous: tolerates air pollution, tolerates heat, tolerant to short-term flooding
