

Magnolia kobus

Mokryeon, Kobus magnolia, Kobushi magnolia

Magnolia kobus (northern Japanese magnolia) comes from the slopes of Japan and Korea. Here it can grow up to 24 metres tall; in cultivation, it is generally restricted to between ten and twelve metres. The six- to eight-metre-wide crown is semi-open pyramidal and later egg-shaped. *Magnolia kobus* can be cultivated as a nice single-stem plant but also occurs naturally as a multi-stem.

Of course, *Magnolia kobus* is at its most spectacular from March to April. Before the foliage appears, the striking hairy flower buds open into a profusion of large, fragrant white flowers. The petals have a pink stripe on the outside and initially the outer petals open fully and the inner petals remain upright. Later all the petals unfold. Unfortunately, the flowers are sensitive to frost and the tree does not flower until mature. *Magnolia kobus* produces a small number of striking pink fruits with red seeds. The inversely obovate leaf buds bronze, changes from green to dark green in the summer, ending up a lovely mellow yellow in the autumn. The species has a wonderful smooth, light grey bark which in older trees resembles birch bark. The dark brown-red twigs make a nice contrast here.

Magnolia kobus is worthy of a spot where it can reach full maturity: in parks or large gardens where there is room to develop into a substantial tree. This stunning magnolia is also used as a street and avenue tree and although paving is not a problem, this species loves high humidity - which is hard to achieve above paved surfaces. The tree thrives on virtually any type of soil, including soil that is slightly chalky but only if damp and humus-rich. A site in the sun or partial shade is appreciated but it also tolerates quite a degree of shade.

SEASONAL COLOURS

TYPES OF PLANTING

Tree types: standard trees, feathered trees, multi-stemmed trees

USE

Location: street, avenue, square, car park / parking lot, park, central reservation, large garden, cemetery | **Pavement:** none, open, sealed

CHARACTERISTICS

Crown shape: wide egg-shaped | **Crown structure:** semi-open | **Height:** 10 - 12 m | **Width:** 6 - 8 m | **Winter hardiness zone:** 6A - 9B

ASPECTS

Wind: tolerant to wind | **Soil:** loess, sabulous clay, light clay, sand, loamy soil | **Nutrient level:** moderately rich in nutrients, rich in nutrients | **Soil moisture level:** moist | **Light requirements:** sun, partial shade | **pH range:** acidic, neutral, alkaline

PLANTKENMERKEN

Flowers: tulip-shaped, striking, big, flower-scented | **Flower colour:** white | **Flowering period:** March - April | **Leaf colour:** buds bronze, green, dark green | **Leaves:** deciduous, obovate, polished | **Autumn colour:** yellow, yellow-brown | **Fruits:** discrete, large, raceme | **Fruit colour:** red, pink-red | **Bark colour:** grey, pale grey | **Bark:** smooth | **Twig colour:** red-brown | **Twigs:** bare | **Root system:** deep, shallow, fleshy roots
